

Embedded Module 16CH UHF **M690**

PRODUCT DESCRIPTION

The Embedded Module 16CH UHF M690, which is part of iDTRONIC's new line of UHF readers, is a high-performance octa-port UHF RFID module based on the IMPINJ New Generation reader chips (E310/ E510/E710).

With its programmable power output of up to 33dBm, the module can achieve reading distances of up to 12 meters (depending on the antenna, transponders, and environment). With an all-aluminum housing and excellent heat dissipation, this reader module can be perfectly embedded into fixed industrial machines, shelving systems and supply chain applications.

The Embedded Module 16CH UHF M690 is equipped with UHF Technology EPC Class 1 Gen 2 (ISO 18000-63) and is globally applicable with a frequency band of 840 - 960 MHz. The Impinj-based reader chip enables it to rapidly read between 350 and 1,000 tags per second (depending on the IC Chip).

iDTRONIC's hardware comes with a useful SDK for the development of controller, Linux or Windows based applications. In addition to the documentation, command protocols and source codes, the SDK includes a Windows-based demo application providing full functionality over all supported UHF RFID standards.
